SEE FASTER, PLAY FASTER

At just 13 years old, Evan England has already made remarkable strides in his athletic endeavors. Whether on the baseball diamond as a shortstop, catcher, or pitcher, or dominating the basketball court as a forward, Evan's passion for sports knows no bounds. However, his journey to success was not without its challenges.

Evan, like many athletes, faced visual obstacles that hindered his performance. But with determination and the assistance of sports vision therapy and Altius performance-enhancing contact lenses, Evan's story has taken a triumphant turn.

Before embarking on his sports vision journey, Evan struggled with depth perception issues that affected his ability to track fly balls and anticipate pitches. In basketball, he found it difficult to gauge the distance of the hoop accurately. These challenges not only affected his performance but also dented his confidence on the field and court.

However, Evan's fortunes changed when he delved into sports vision therapy and incorporated Altius lenses into his routine. The improvements were profound. His batting average skyrocketed from 200 to an impressive 500, earning him the title of the best player on his baseball team. On the basketball court, Evan felt a newfound confidence in his shooting ability, thanks to enhanced visual acuity.

Evan credits his success to a diverse range of vision therapy exercises. Blaze pod activities expanded his peripheral vision and enhanced reaction speed. Eye tracking, convergence, near-far focusing, and peripheral vision training improved his spatial awareness and responsiveness.

NeuroTracker sessions sharpened decision-making skills. Combined with Altius lenses, these exercises propelled Evan to excellence, highlighting the power of vision therapy in sports. Initially, Evan encountered minor challenges with inserting the lenses, but his perseverance paid off, and soon, it became second nature.

Compared to other vision correction options like sports glasses, Evan found Altius lenses to offer unparalleled clarity without obstructing his view during crucial moments in the game.

Reflecting on his journey, Evan recalls a defining moment when his performance drastically improved with Altius lenses. From throwing a mere 4 strikes out of 23 pitches to delivering an outstanding performance the following weekend, Evan's achievement speaks volumes about the lenses' impact.

Beyond the tangible improvements in his performance, Evan highlights the boost in his confidence and enjoyment while playing sports. With Altius lenses, he no longer second-guesses his actions but approaches each game with a sense of assurance, knowing he has the visual edge.

Evan's endorsement of Altius lenses extends beyond baseball and basketball. He believes that athletes across various sports, including golf and tennis, can benefit from the enhanced visual experience they provide, regardless of the color enhancements specific to each sport.

In conclusion, Evan's success story serves as a testament to the transformative power of sports vision therapy and Altius performance-enhancing contact lenses. Through dedication, perseverance, and the right tools, Evan has unlocked his full potential on the field and court, inspiring athletes of all ages to strive for greatness.
